

Adam Phillips

NETWORK ENGINEER | TELECOMS & AUTOMATION

07983 206039 | adam.phillips@ross-lab.org | ross-lab.org | [arphillips06](https://github.com/arphillips06) | [adam-ross-phillips-4191448a](https://www.linkedin.com/in/adam-ross-phillips-4191448a)

Network Engineer with strong service provider experience across access, core and switching environments. Skilled in routing, traffic engineering, automation and network design, with hands-on delivery in greenfield and production networks. Proven in authoring technical designs, collaborating with vendors, and driving platform improvements through automation. Strong background in Juniper, MPLS, BGP, EVPN and XGS-PON access networks, with growing DevOps and CI/CD capability.

Professional Experience

Senior Network Infrastructure Specialist

GLOBAL

January 2026 – Present

- Leading multiple projects including replacing the entire estate from Extreme EXOS to Juniper and Arista.
- Designed an in-service upgrade path so the network can adopt new technologies with minimal downtime in a highly sensitive environment.
- Troubleshooting a multicast environment with several thousand endpoints.
- Led PoC work on Juniper to interoperate with existing vendors.
- Implemented DDoS mitigation.
- Assisted the broadcast team with automation work to monitor their environment.
- Introduced change control processes and IPAM.
- Writing automation tooling in Go and Python to support the above.

Network Engineer

VITRIFI

March 2022 – December 2025

- Elicited business and technical requirements to design and deploy new access and switching platforms in a greenfield ISP environment.
- Authored and maintained HLD and LLD documentation for XGS-PON access and EVPN switching services.
- Designed and implemented an EVPN-based switching fabric on white-box platforms.
- Engineered Juniper MPLS and BGP core configurations aligned with best practices.
- Led vendor engagement and bug scrubbing with a Network Operating System supplier to influence software improvements.
- Built and deployed a DDoS mitigation proof-of-concept, coordinating testing and production deployment.
- Owned technical input for a new lab deployment, including hardware selection, validation testing and documentation.
- Collaborated with test and fulfilment teams during PoC validation and production rollout.

Network Operations Engineer

SWISH FIBRE

September 2021 – March 2022

- Operational support of Adtran XGS-PON access networks in a live service provider environment.
- Worked closely with field engineers during deployment, fault diagnosis and service activation.
- Provided escalation support to internal service desks for complex broadband and access faults.
- Deployed internal infrastructure services including customer speed test platforms.
- Contributed to core network migration design documentation involving MPLS signalling evolution.

Technical Support Engineer

HSo

February 2020 – September 2021

- Promoted to 2nd line engineer within three months based on technical performance.
- Advanced troubleshooting of Juniper MX, EX and SRX routers and switches.
- Firewall configuration, policy design and troubleshooting on Juniper SRX and FortiGate.
- CPE build, staging, validation and customer deployment for service provider customers.
- Delivered live migrations from legacy core platforms, supporting change and MOP execution.

Junior Technical Support Engineer

HSo

October 2019 – January 2020

- Delivered first-line troubleshooting across network, Linux and VMware platforms in a service provider environment.

Key Technical Skills

Routing & Core

- BGP, MPLS, traffic engineering, EVPN, VLANs, VRFs

Access & Edge

- XGS-PON, OLT/ONU provisioning, broadband service delivery

Firewalls & Security

- Juniper SRX, FortiGate, firewall policy design

Automation & DevOps

- Go, Python, NETCONF, Jinja2, Git-based configuration management

Platforms

- Juniper MX/EX/SRX, Arista EOS, Extreme EXOS, Cisco IOS/IOS-XE, white-box switching

Infrastructure

- Linux, VMware, Proxmox, EVE-NG, Kubernetes (developing), CI/CD

Protocols

- TCP/IP, DNS, HTTP/S, SSL/TLS

Interests

Home lab: multi-vendor lab for routing, MPLS, EVPN, automation and Kubernetes testing.

Maintain my own domain and self-host the applications I have developed.

Esports: competitive sim racing.

Electronics: retro computing and home electronics projects.
